

# Old habits are hard to break, but

It is only a matter of communicating the pros and cons of the habit. World Vision India communicates the adverse effects of open defecation, unwashed hands, unclean water, and the benefits of having a toilet at home, washing hands and potable water.

World Vision India's WASH (Water, Sanitation & Hygiene) programme helps children and families in the 6252 communities we serve have access to improved hygiene and sanitation.

with the support from corporate partners and sponsors WASH programme has provided.

**People with access to potable water**

FOR CHANGE. FOR LIFE.

It when they do, miracles happen.

Going into the jungle for defecating ends with my mother's generation 🍌🍌🍌 - Elisa

## Changing lifestyle

“Going into the jungle for defecating ends with my mother’s generation”, says Elisa from Dangs, Gujarat. The Community-Led Total Sanitation (CLTS) has effectively changed the behaviour of an entire generation. Now 14-year-old Elisa and many other girls and boys in her community do not think open defecation is a good idea anymore.
